

AFRICAN CLAWED FROG XENOPUS LAEVIS DISEASES AND CLINICAL SIGNS IN PHOTOGRAPHS

THERESE JONES-GREEN

Wellcome Trust/Cancer Research UK Gurdon Institute, University of Cambridge

Many diseases of *Xenopus laevis* frogs have been described in the literature however, it is often difficult to find images which clearly illustrate associated clinical signs. This poster has been designed as a refinement to bridge this gap using photographs taken of frogs with clinical signs.

My aims are:

To share my experiences, via images, to help improve the welfare and husbandry of this species.

To stimulate a dialogue which results in further sharing of ideas and information.
